Nadia Vorndran

Senior Associate - GIS Data Analyst at Fernridge Solutions

City of Johannesburg, Gauteng, South Africa

Experience

Fernridge Solutions

15 years 1 month

Senior Associate - GIS Data Analyst

May 2018 - Present (8 years 5 months)

Cresta, Johannesburg

Throughout my tenure at Fernridge Solutions, I have worked on all types of retail and shopping centre demographic feasibility studies. These projects require sourcing, cleaning and analysis of various data sources, including collecting consumer insights, and ultimately displaying the finding in clear and concise reports.

Data visualization, design and implementation of new BI dashboards for business users, formed an important part of my weekly duties.

Most of the projects that I work on require engagement with stakeholders to understand the business needs and to identify opportunities for insight analysis to inform their decision making.

My role has enabled me to continue to learn and grow my knowledge, to become proficient in the various new technologies that have been embraced by the business including ESRI ArcGIS Pro, Survey123, Power BI etc.

GIS Data Analyst - Retail

September 2011 - May 2018 (6 years 9 months)

Cresta Johannesburg

Initially when started working I designed and build Access database to help manage multiple mathematical queries on large data sets maintaining data integrity.

Data validation and cleanup had to be completed before every import and export.

Creation of excel templates were also needed to standardize the look and feel of reports for the final project deliverable.

I then became part of the consulting team and used my analytical skills to streamline as many business processes as possible, when conducting retail and shopping centre studies.
